

TECHNICAL SKILLS

Languages: Python [Advanced], JavaScript [Intermediate], C++ [Intermediate] (*Kalvium Dojo Belt Levels*)
AI / LLM: Google Gemini API (LLM + Embeddings), RAG, AI Agents, Multi-Agent Orchestration, Vector Search (MongoDB Atlas), Semantic Search, Reranking, Prompt Engineering, LangChain, LangGraph
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Vite
Backend: Node.js, Express.js, REST APIs, JWT Authentication, NextAuth.js, RBAC, Socket.io, CRUD Operations
Databases: MongoDB, MongoDB Atlas Vector Search, Mongoose, MySQL, Prisma ORM
Tools / Frameworks / Version Control / API Technologies: Git, GitHub, GitHub Actions, Docker, AWS EC2, Linux, Google Cloud Storage, Postman, Jest, Supertest, Cloudinary, Render, Vercel, Twilio, Nodemailer

PERSONAL STATEMENT

Full-stack developer with hands-on AI/LLM experience, skilled in React, Next.js, Node.js, REST APIs, JWT authentication, and Docker-based deployment. Built ResolveAI, a multi-agent GenAI platform using Gemini LLM and embeddings, RAG, and MongoDB Atlas Vector Search, and shipped 2 full-stack web applications at Pixorama (deployed on AWS EC2). Seeking an Engineering Intern role to integrate LLMs and AI agents into real client products and automation workflows.

PROJECTS

- ResolveAI — Multi-Agent AI IT Incident & Support Platform | [GitHub Repo](#)** 2026
- Built a full-stack GenAI platform that automates IT incident triage and root-cause diagnosis using a sequential pipeline of 5 specialized LLM agents: triage, retrieval, diagnosis, resolution, and escalation.
 - **RAG & Vector Search:** Built PDF ingestion with text cleaning, chunking, and Gemini embeddings; used MongoDB Atlas Vector Search (cosine similarity) with query rewriting and reranking to ground answers in verified documentation.
 - **Human-in-the-Loop & Security:** Added confidence-threshold escalation to human agents, JWT/bcrypt authentication, and 3-role RBAC (Employee, Agent, Admin); tested backend APIs with Jest and Supertest.
 - **Tech Stack:** React 18, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, Gemini API, REST APIs.
- BOAT Warranty Hub — Full-Stack Warranty Management Platform | [GitHub Repo](#)** Jul 2026 - Present
- Built a Next.js platform where customers verify product warranties by serial number, view product and repair history, and securely download warranty documents via Google Cloud Storage signed URLs.
 - **Admin & Auth:** Built an RBAC-protected admin dashboard for Product and Repair CRUD; implemented NextAuth.js/JWT/bcrypt authentication with middleware route protection.
 - **Tech Stack & Deployment:** Next.js, MySQL, Prisma, Tailwind CSS, Docker; set up GitHub Actions CI/CD for production deployment on Vercel.

EXPERIENCE

- Pixorama | Software Development Intern** Jun 2026 - Aug 2026
- Built and contributed to 2 full-stack web applications used by real users, engineering REST APIs, authentication flows, and containerized deployment pipelines.
 - **Technology used:** Leveraged React.js, Node.js, Express.js, MongoDB, REST APIs, Docker, AWS EC2, Git, and Linux to develop and deploy both applications end to end.
 - **Impact delivered:** Shipped validated backend APIs and debugged authentication and CRUD workflows, strengthening data integrity and reliability across both applications.
 - **Recognitions or Highlights:** Collaborated directly with engineering mentors to ship features; contribution formally verified — [Experience & Reference Letter](#).

EDUCATION ENROLLMENT

Kalvium's UG Program in CS (Software Product Engineering) 2025 - 2029
Campus: Gurugram | Bachelor's enrolment: B.Tech, SGT University

ACHIEVEMENTS & EXTRACURRICULARS

- **Technical Contributions:** Builds and showcases full-stack and generative AI projects, including RAG and multi-agent applications, in a public GitHub portfolio — [GitHub](#).
- **Technical Practice:** Practices data structures and algorithms through consistent, hands-on problem-solving exercises.
