

Bhavish Trehan

Full-Stack Developer | MERN Stack | Backend APIs & Authentication
bhavishtrehan777@gmail.com | +91 7827881996 | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)
Rohtak, Haryana, India

PERSONAL STATEMENT

Full-stack developer focused on building scalable web applications, secure authentication systems, backend APIs, and deployment workflows. Experienced with the MERN stack, Docker, REST APIs, and JWT. Interested in solving practical product problems and turning ideas into reliable, production-ready systems.

TECHNICAL SKILLS

Languages: JavaScript, Python, C++

Frontend: HTML5, CSS3, Next.js, React.js, Tailwind CSS, Responsive Design, Vite

Backend: Node.js, Express.js, REST APIs, JWT Authentication, CRUD Operations

Databases: MongoDB, Mongoose, SQL, NoSQL

Tools & Technologies: Git, GitHub, Postman, Docker, Docker Compose, Cloudinary, Render, Vercel, Twilio, Nodemailer

EXPERIENCE

Pixorama — Software Development Intern

15 May 2026 – 15 Aug 2026

- Developed and contributed to full-stack web applications using React.js, Node.js, Express.js, and MongoDB.
- Technology used: React.js, Node.js, Express.js, MongoDB, REST APIs, Git, Linux, Docker, AWS EC2, GitHub Actions.
- Impact delivered: Contributed to backend APIs, authentication workflows, database integration, debugging, testing, and deployment support.
- Key learnings: Strengthened understanding of production-ready development, cloud deployment, and collaborative debugging.

[Experience & Reference Letter](#)

PROJECTS

Boat-app — E-Commerce Web Application

[Repo Link](#)

Next.js, React, Prisma, PostgreSQL, NextAuth, JWT, Docker, Jest

- Built a full-stack e-commerce web application on Next.js and React, with a Prisma-modeled PostgreSQL database and NextAuth/JWT-based authentication with bcrypt password hashing.
- Integrated Google Cloud Storage for media handling and Zod for schema validation across API routes.
- Containerized the app with Docker and Docker Compose, added a Jest test suite with coverage reporting, and set up GitHub Actions CI; deployed live on Vercel.

Full-Stack Advanced Reset System — Authentication System

[Repo Link](#)

Node.js, Express.js, MongoDB, React, JWT, Docker

- Built a full-stack authentication system with JWT access/refresh tokens, role-based access control, and secure crypto-based reset-token generation.
- Implemented forgot-password and email-based reset flow with Nodemailer, plus a dedicated React frontend page for resetting passwords end-to-end.
- Dockerized the frontend, backend, and MongoDB with Docker Compose for a one-command local setup.

AI-Integration — Generative AI Knowledge Assistant

[Repo Link](#)

Google Gemini, Express.js, MongoDB, Mongoose, MongoDB Vector Search, RAG, AI Agents

- Built a Generative AI knowledge assistant using Google Gemini with embeddings, semantic search, and RAG for context-aware question answering.
- Implemented advanced retrieval (query rewriting, hybrid vector + keyword search, RRF, deduplication, metadata filtering) and AI agents with tool calling and multi-step agent loops.
- Added multimodal image understanding and a PDF-based RAG pipeline, on a modular Express.js/Mongoose backend with MongoDB Vector Search.

EDUCATION

Kalvium's UG Program in CS (Software Product Engineering)

2025 – 2029

Campus: SGT University, Gurgaon | B.Tech in Computer Science Engineering (Software Product Engineering)

First Year CGPA: 9.50 / 10.00

ACHIEVEMENTS & EXTRACURRICULARS

- Technical Contributions: Built and deployed full-stack applications involving authentication systems, CRM workflows, database management, and deployment automation.
- Technical Practice: Continuously improving problem-solving skills through Data Structures and Algorithms practice.
- Engineering Exposure & Interests: Backend architecture, database integration, REST APIs, Docker, AWS, secure authentication mechanisms, and exploring emerging technologies through practical software projects.
